	Eff. Date: 20-12-2024	Page: 2 of 31

Control of System Software as per clause 5.18 of API 16D edition 3rd.

1. Purpose

- 1.1. The scope of this procedure for BOP control system software design verification, installation and validation procedure. It also includes software FMEA and its maintenance.

2. Reference documents

- 2.1. API 16D

3. General requirement as per clause 5.18.1 of API16D

- 3.1. The control system software requirement per customer should be fulfilled. The proof of fulfilment should be verified , documented and provided to customer. The Proof of fulfilment is to be covered through **Factory Acceptance Test (FAT) procedure for individual control unit.**
- 3.2. The reference standards and process involved in the design and development of the system software is to be followed properly.
- 3.3. The processes involved in Design and Development beside upgradation of software is to be documented with tracibility records and revision no. (eg: The PLC input and Output addressing to be preseved with identification no.)
- 3.4. The software is passoward protected to prevent its use by the person do not have in proper knowledge of design and deveoploment of software.
- 3.5. Software used- 10.0 PAC Machine Edition Professional Development Suite or simatic step 7 version 19.0
programming language - Ladder Diagram OR LD
Standard used- IEC 61131-3
programmable logic controller (PLC) used – EMERSON or SIEMENS

4. Classification of Software Life Cycle Process as per clause 5.18.2 of API 16D

Software life cycle is process by which software is developed , deployed and sucessfully installed on the control unit.

The software life cycle process shall include the following:

- 4.1. Software functional specification

	SARA SAE ENGINEERING SPECIFICATION	
	Section: SES 26 – 853	
	Issue: “A”	Rev No: “2”
	Eff. Date: 20-12-2024	Page: 3 of 31

- 4.2. Software Design and Development
- 4.3. Software Verification and Validation
- 4.4. Software Production and Maintenance

5. Software functional Specification per clause 5.18.3 of API16D

- 5.1. All the functional specification is documented per clause 5.18.3.1 of API16D in Annexure 'A' of SARA SAE/R&D-TP-0198
- 5.2. All the additional functional specification is documented per clause 5.18.3.2 of API16D in Annexure 'A' of SARA SAE/R&D-TP-0198
- 5.3. Technical requirement of system capabilities represent in checklist and documented per clause 5.18.3.3 of API 16D in Annexure 'A' of SARA SAE/R&D-TP-0198
- 5.4. Software functional specification review format documented per clause 5.18.3.4 of API16D in Annexure 'B' of SARA SAE/R&D-TP-0198

6. Software Design and Development as per clause 5.18.4 of API 16D

- 6.1 Software design review should be conducted and tested at different stages as per clause 5.18.4.1 of API 16D. All panel should be tested individually at preliminary , critical and final design stages and documented in Annexure 'B' of SARA SAE/R&D-TP-0198
- 6.2 The system design architecture drawing includes system topology,logic flow diagram as per clause 5.18.4.2of API16D and documented in Annexure 'C' of SARA SAE/R&D-TP-0198
- 6.3 Failure modes effect analysis (FMEA) per clause 5.18.4.3 of API16D is to be carried out and documented in Annexure 'G' of SARA SAE/R&D-TP-0198
- 6.4 The design and development of software code should followed per IEC standard.
- 6.5 The software code includes the design and devoplement of programming software that it could be understood and implemented by other relevant software engineer. as per clause 5.18.4.5 of API16D
- 6.6 Softcopy of installation and devoplement tools guide should be documented as per clause 5.18.4.6 of API16D (manufacturer, software platform and version) .
- 6.7 Software itself enables developer to provide the possible solution if some error occurred. Generally,this is possible by using PLC software inbuilt.

7. Software Validation and Verification as per clause 5.18.5 of API 16D

	SARA SAE ENGINEERING SPECIFICATION	
	Section: SES 26 – 853	
	Issue: “A”	Rev No: “2”
	Eff. Date: 20-12-2024	Page: 4 of 31

- 7.1 Software verification and validation for BOP control system enable user to provide local, system and global effect per **Annexure 'G'** of SARA SAE/R&D-TP-0198
- 7.2 PLC Software enable and validate all the operational logic , instructions and communication parameter
- 7.3 The Individual software component testing is to be documented in **Annexure'B'** of SARA SAE/R&D-TP-0198
- 7.4 Assembled panel testing performance is to be documented in **Annexure'B'** of SARA SAE/R&D-TP-0198
- 7.5 Every line of code and corresponding logic path having statement true/false is to be executed at least once. This facility is available in plc software itself.
- 7.6 The Software integration level test is to be done to test the complete integrated Modules beside testing individually before integrating the components. Once all the module are tested, software integration testing is done by integrating all the modules and the system as a whole is tested. and the result is to be documented in **Annexure'B'**
- 7.7 The testing shall be performed with BOP control unit per **Factory Acceptance Test procedure (FAT)**.
- 7.8 In case of failure of the communication between the panels provision of communication fail alarm is to be incorporated through software.
- 7.9 Every line of code and logic path shall be tested as part of white box testing as per **Annexure 'E'**
- 7.10 Single Unit functionality which provides input v/s output shall be treated as black box testing as per **Annexure 'B', Annexure 'F' & Annexure 'A'**

8. Software Production and Maintenance as per clause 5.18.6 of API 16D

- 8.1. The modification to existing software shall be reviewed and documented in softcopy (retain old program and modify program)
- 8.2. The PLC software is developed ,deployed and installed under software development life cycle (SDLC) with traceability records.
- 8.3. The Updated software if amended is to be reviewed and documented in softcopy.
- 8.4. The software shall be recorded with its current revision having all the details i.e.date, time, reason, unique identification and name of person conducting change. Software Back-up is to be stored in safe location separately. in **Annexure'H'**
- 8.5. Risk assesment is not to be carried out for software security being internet access and internet accessability to software.

	SARA SAE ENGINEERING SPECIFICATION	
	Section: SES 26 – 853	
	Issue: “A”	Rev No: “2”
	Eff. Date: 20-12-2024	Page: 5 of 31

- 8.6. The latest version of manufacturer supplied software platform is to be used to create PLC Programme for control unit. Date of incorporation of latest software platform is to be recorded.

	SARA SAE ENGINEERING SPECIFICATION	
	Section: SES 26 – 853	
	Issue: “A”	Rev No: “2”
	Eff. Date: 20-12-2024	Page: 6 of 31

Annexure 'C'

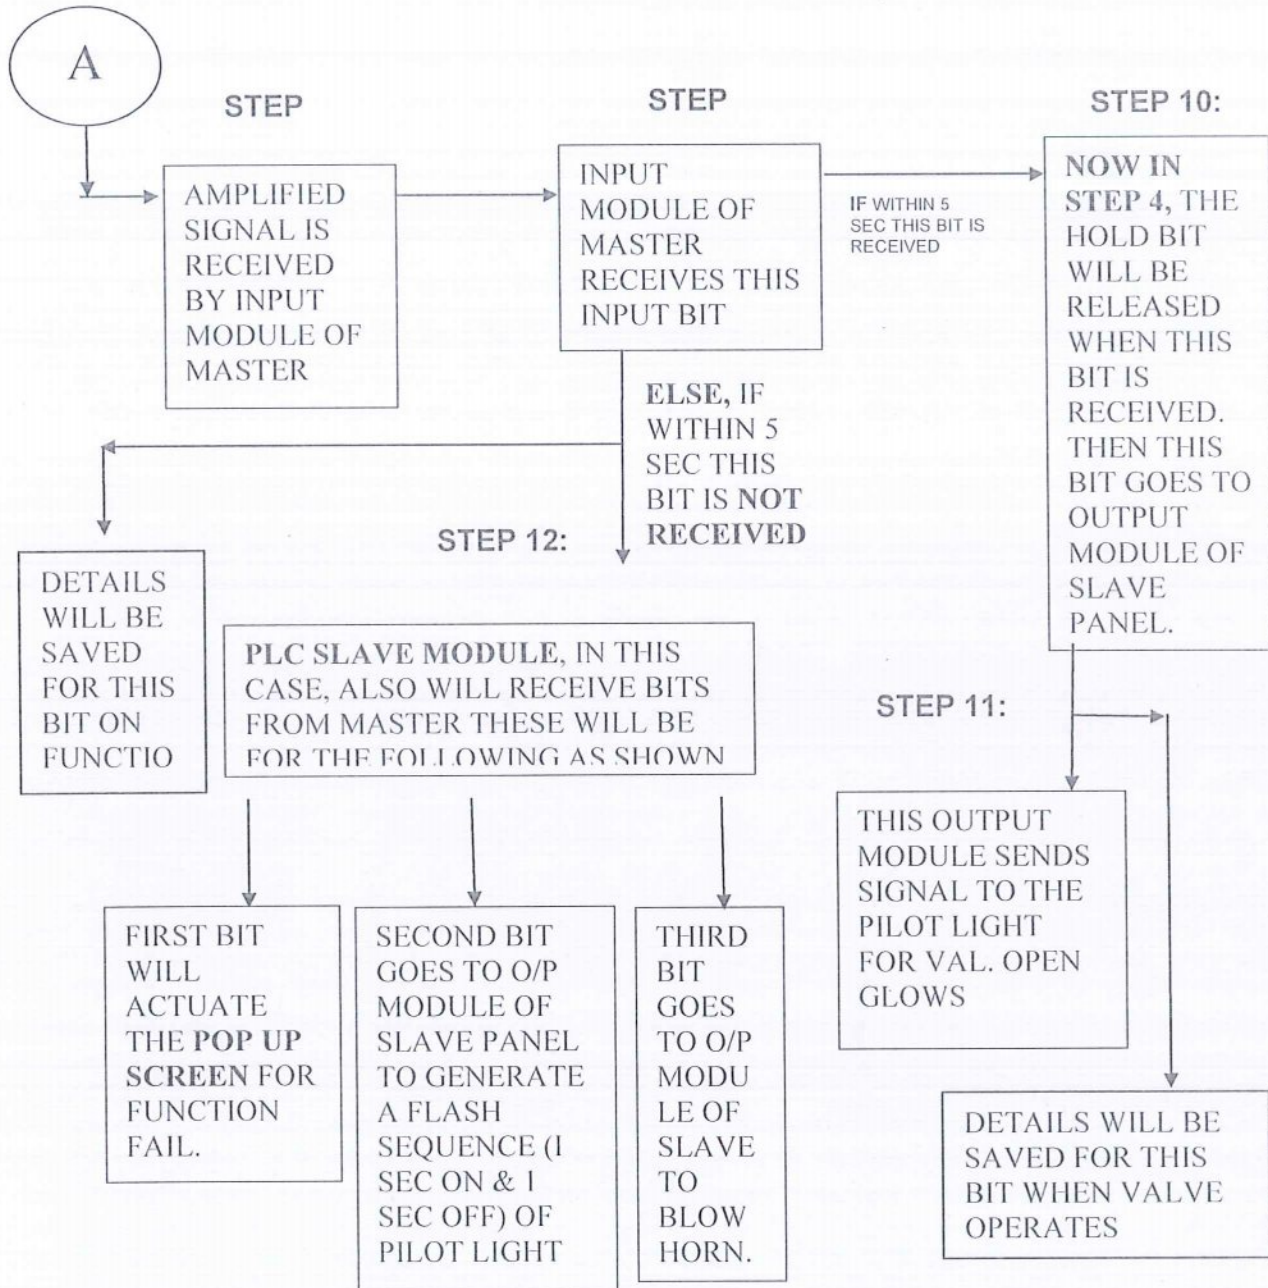

SOFTWARE FUNCTION PROCEDURE FOR PLC SLAVE PANEL

OBJECTIVE: TO CREATE A BLOCK DIAGRAM WHICH WILL SHOW HOW A VALVE CAN BE OPERATED FOR OPEN & CLOSE FUNCTIONS

BASIC LAYOUT: (A) FOR OPEN FUNCTION

	SARA SAE ENGINEERING SPECIFICATION	
	Section: SES 26 – 853	
	Issue: “A”	Rev No: “2”
	Eff. Date: 20-12-2024	Page: 7 of 31

	SARA SAE ENGINEERING SPECIFICATION	
	Section: SES 26 – 853	
	Issue: “A”	Rev No: “2”
	Eff. Date: 20-12-2024	Page: 8 of 31

NOW THESE THREE BITS WILL HAVE TO RESET BY ACKNOWLEDGE (ACK.) BUTTON ON THE SLAVE MODULE.

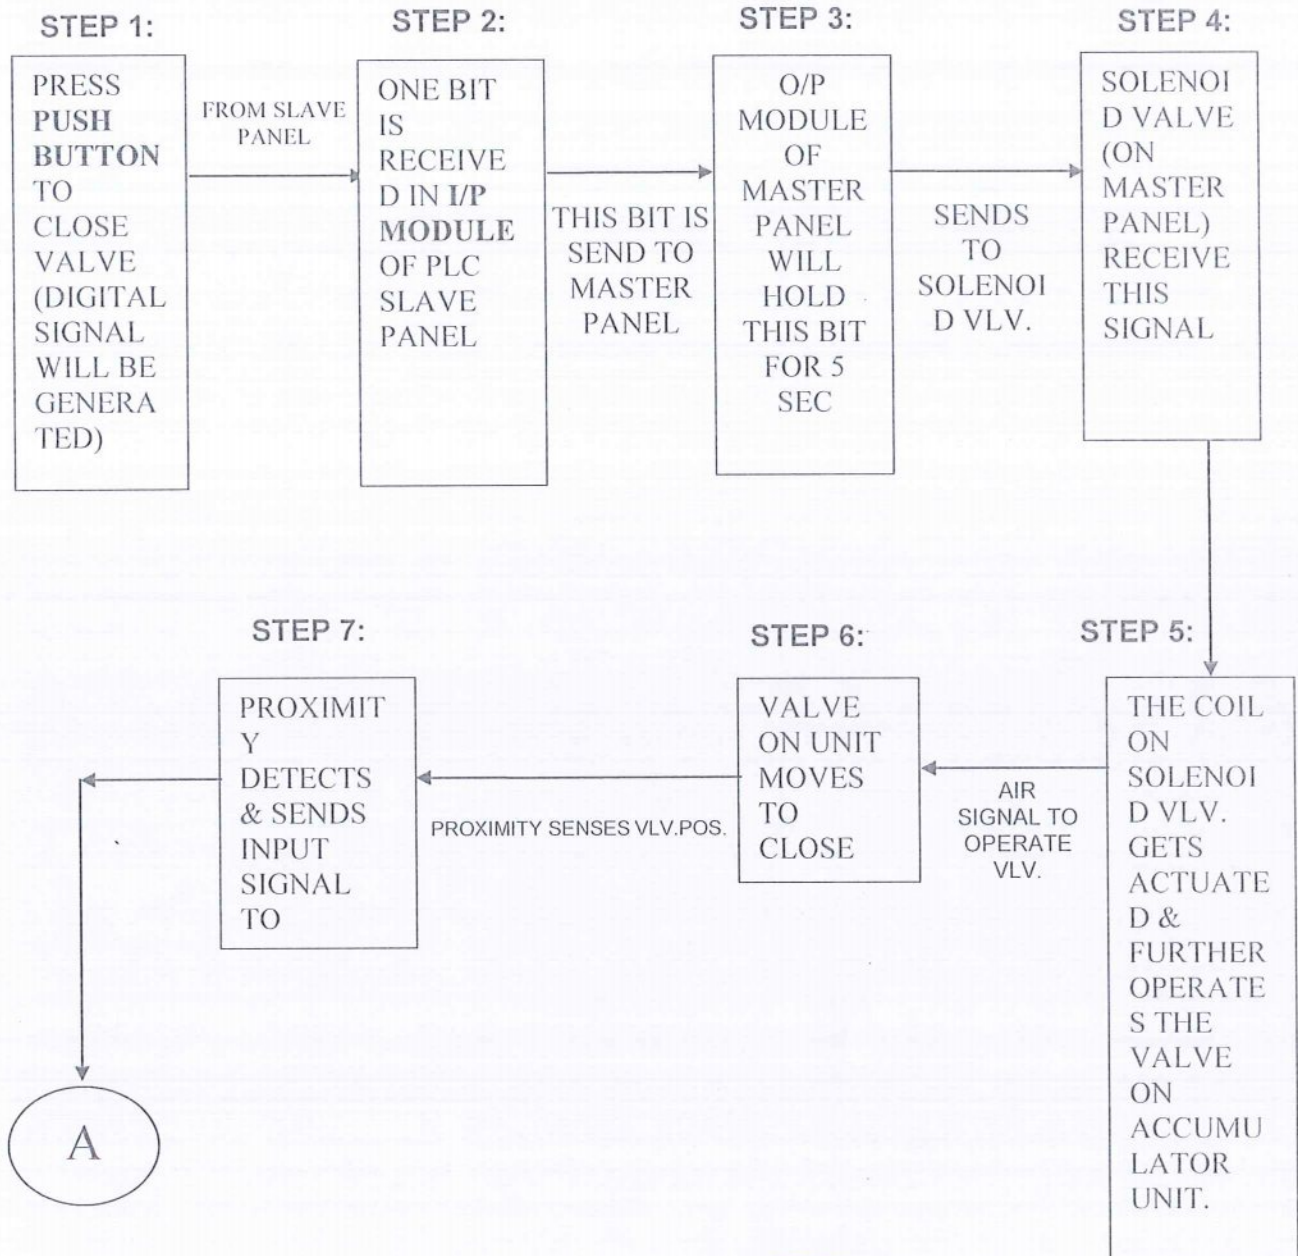

(THIS WILL BE BECAUSE THERE WILL BE NO SIGNAL FROM MASTER PANEL FURTHER)

	SARA SAE ENGINEERING SPECIFICATION	
	Section: SES 26 – 853	
	Issue: "A"	Rev No: "2"
	Eff. Date: 20-12-2024	Page: 9 of 31

BASIC LAYOUT: (B) FOR CLOSE FUNCTION

	SARA SAE ENGINEERING SPECIFICATION	
	Section: SES 26 – 853	
	Issue: “A”	Rev No: “2”
	Eff. Date: 20-12-2024	Page: 10 of 31

NOW THESE THREE BITS WILL HAVE TO RESET BY ACKNOWLEDGE (ACK.) BUTTON ON THE SLAVE MODULE.

	SARA SAE ENGINEERING SPECIFICATION	
	Section: SES 26 – 853	
	Issue: “A”	Rev No: “2”
	Eff. Date: 20-12-2024	Page: 11 of 31

(THIS WILL BE BECAUSE THERE WILL BE NO SIGNAL FROM MASTER PANEL FURTHER)

	SARA SAE ENGINEERING SPECIFICATION	
	Section: SES 26 – 853	
	Issue: “A”	Rev No: “2”
	Eff. Date: 20-12-2024	Page: 12 of 31

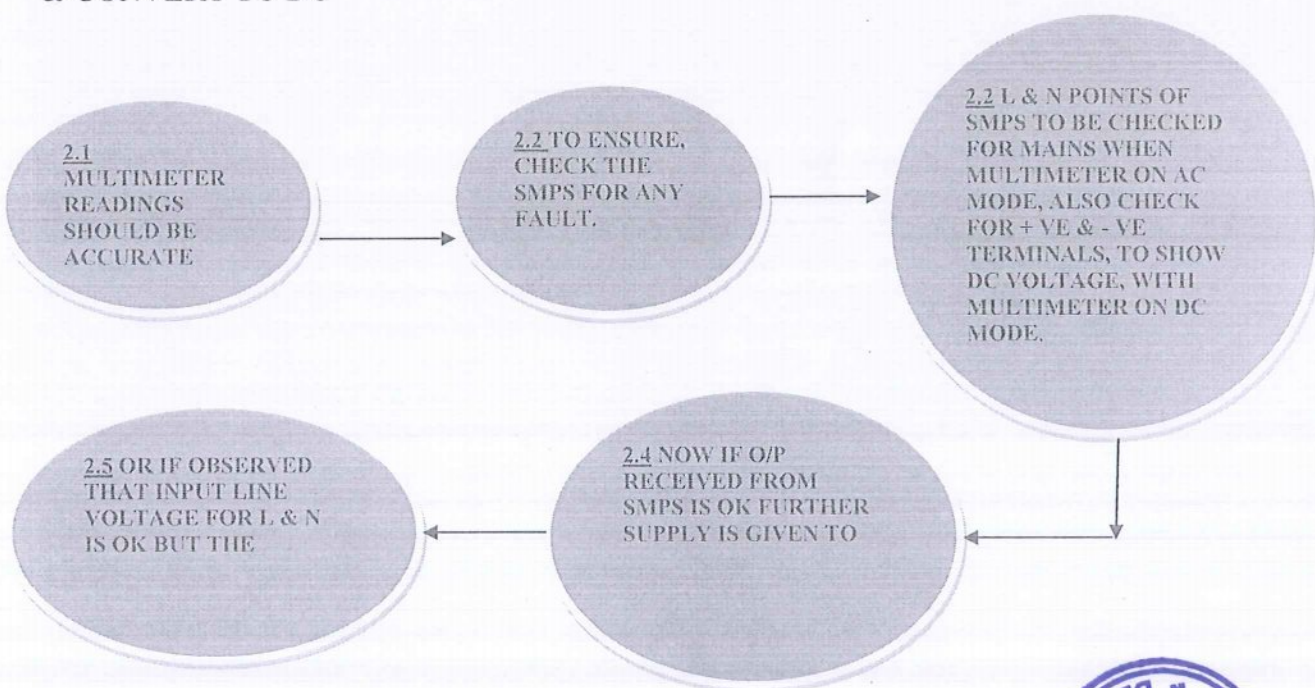

Annexure 'D'

TROUBLESHOOTING GUIDE FOR SMART CONTROL PLC PANEL

FAULT - 1: ON TURNING ON THE PANEL, NOTHING COMES UP

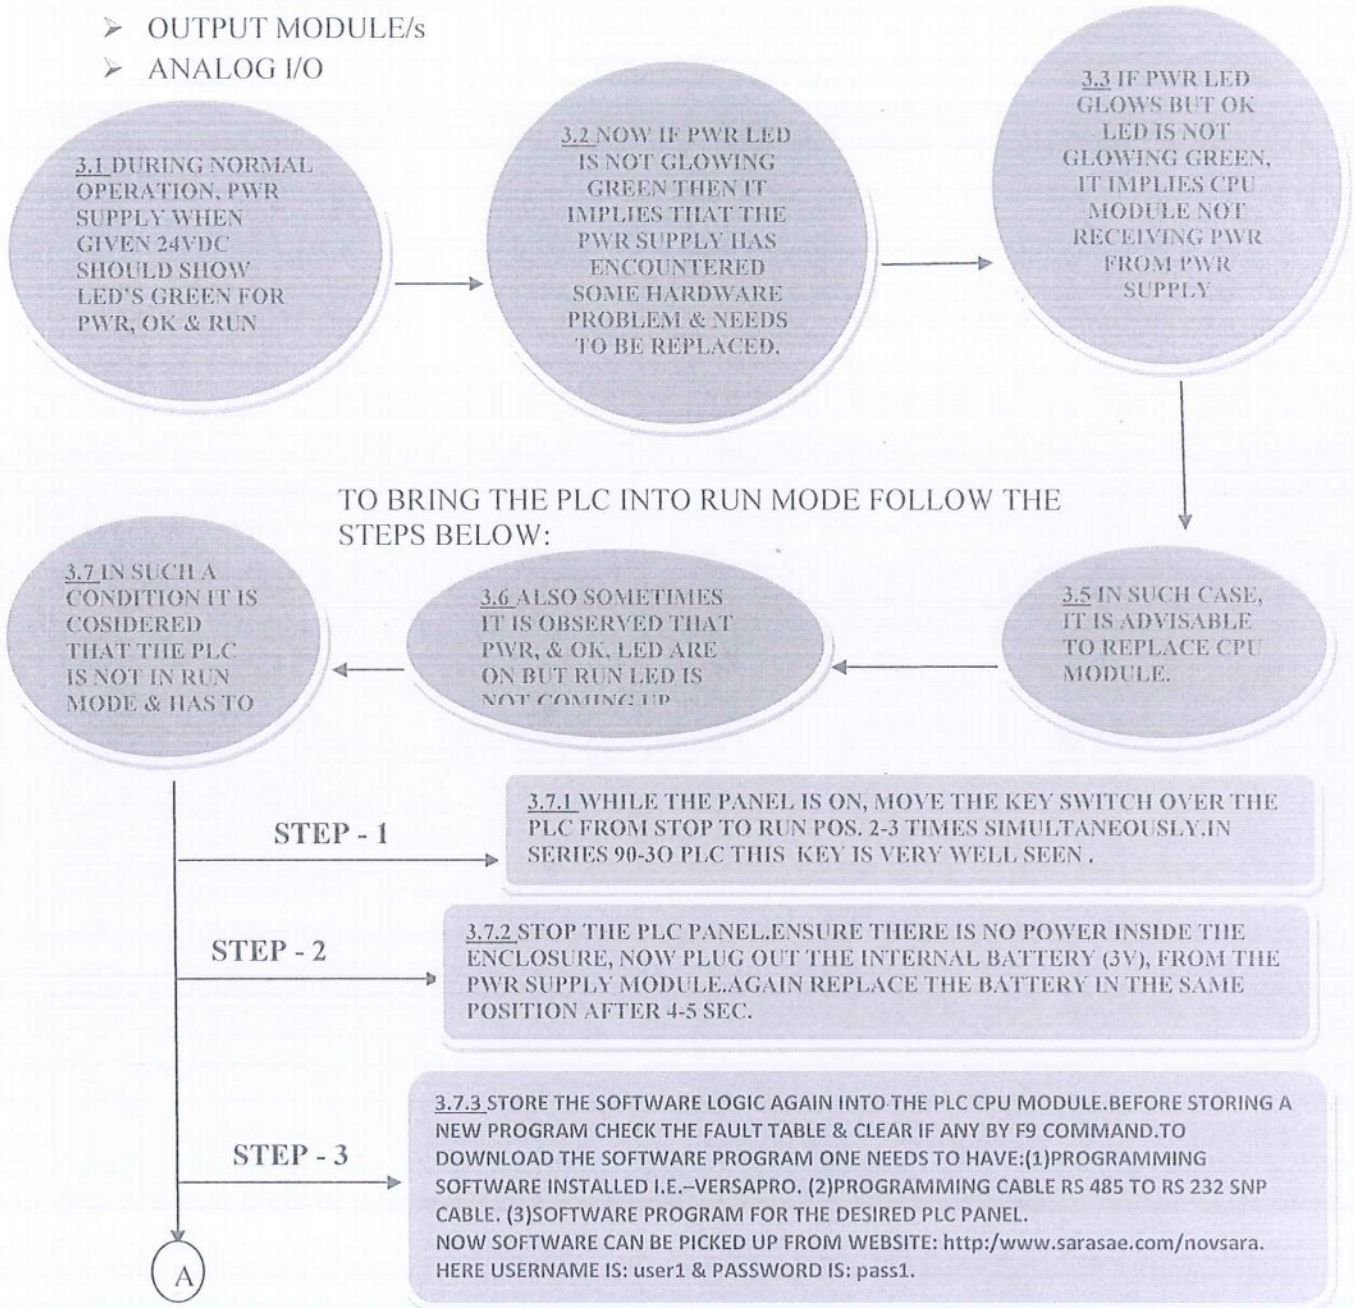

FAULT - 2: AC –DC CONVERTER (SMPS) IS SUSPECTED TO RECEIVE MAINS SUPPLY & CONVERT TO DC

	SARA SAE ENGINEERING SPECIFICATION	
	Section: SES 26 – 853	
	Issue: “A”	Rev No: “2”
	Eff. Date: 20-12-2024	Page: 13 of 31

FAULT - 3: PROBLEMS OBSERVED ON PLC MODULES

- POWER SUPPLY
- CPU MODULE
- INPUT MODULE/s
- OUTPUT MODULE/s
- ANALOG I/O

	SARA SAE ENGINEERING SPECIFICATION	
	Section: SES 26 – 853	
	Issue: “A”	Rev No: “2”
	Eff. Date: 20-12-2024	Page: 14 of 31

	Section: SES 26 – 853	
	Issue: “A”	Rev No: “2”
	Eff. Date: 20-12-2024	Page: 15 of 31

B

3.10 ANALOG
INPUT &
OUTPUT
MODULES ARE
USED TO SENSE
& TRANSMIT
THE SIGNAL
FROM
TRANSDUCER

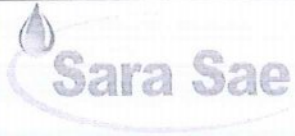

3.10.1 ANALOG INPUT
MODULE INSTALLED
ON MASTER
RECEIVES SIGNAL
FROM TRANSDUCERS
& FURTHER SENDS
THE DIGITAL
VALUES TO THE
DIGITAL METERS OR
SCREENS INSTALLED
ON THE SLAVE
PANELS.

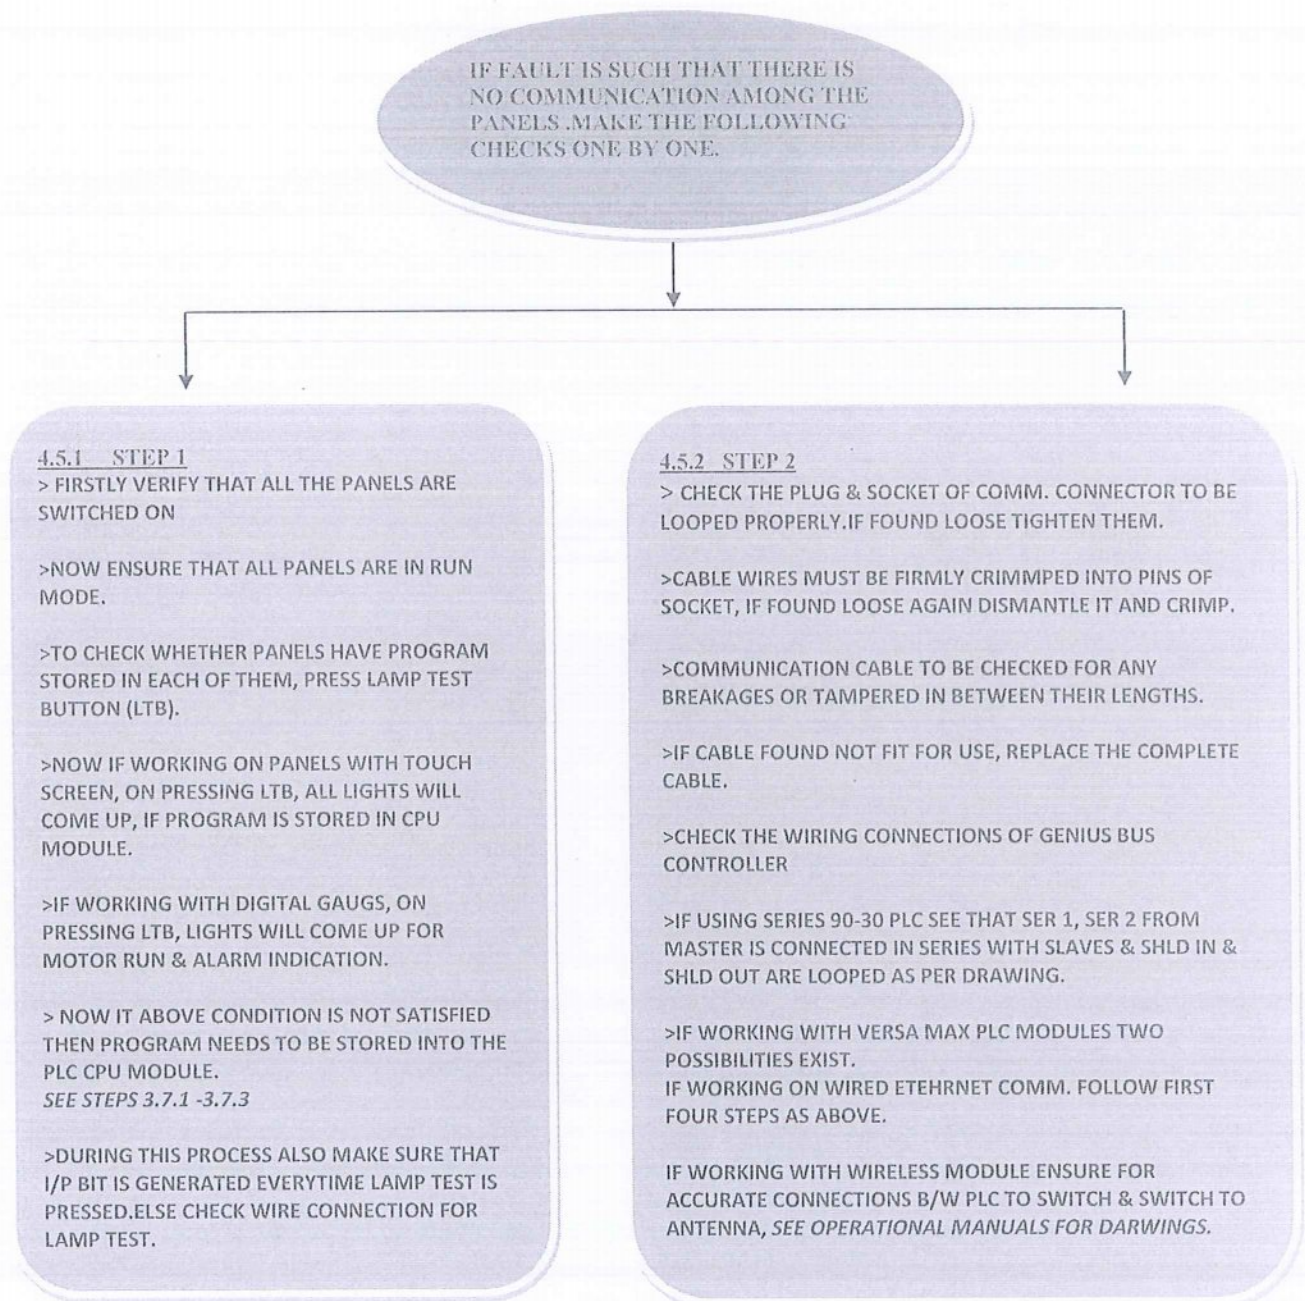

3.10.2 IMP:
TRANSDUCER GIVES
SIGNAL TO THE INPUT
ANALOG MODULE ON
THE MASTER PANEL IN
THE CURRENT RANGE
FROM 4 – 20 MILLI
AMPERES I.E. 0
PRESSURE SET AT 4
MILLI AMP. &
MAXIMUM PRESSURE
SET AT 20 MILLI
AMPERES.

	SARA SAE ENGINEERING SPECIFICATION	
	Section: SES 26 – 853	
	Issue: “A”	Rev No: “2”
	Eff. Date: 20-12-2024	Page: 16 of 31

FAULT- 5: NO COMMUNICATION BETWEEN MASTER PANEL & SLAVE PANELS.

	SARA SAE ENGINEERING SPECIFICATION	
	Section: SES 26 – 853	
	Issue: “A”	Rev No: “2”
	Eff. Date: 20-12-2024	Page: 17 of 31

FAULT- 6: NO READINGS IS OBSERVED ON DIGITAL GAUGES

6.1 DIGITAL METERS (DM) ARE USED TO SHOW PRESSURE READINGS OF ACCUMULATOR, MANIFOLD, ANNULAR & RIG AIR PRESSURE. POSSIBILITY EXIST THAT THESE DIGITAL METERS (DM) WOULD NOT SHOW READINGS OR WOULD NOT WORK AS DESIRED. FOLLOW THESE TROUBLE SHOOTING STEPS

6.1.1

IF DM IS NOT SHOWING ANY READINGS FIRSTLY CHECK THE 24 VDC SUPPLY ON IT.

NOW CHECK THE CONNECTIONS BETWEEN THE ANALOG OUTPUT MODULE & THE DM WITH THE HELP OF MULTIMETER MAKE SURE YOU SWITCH OFF THE PANEL EVERYTIME, BEFORE CHECKING THE CONTINUITY. CONNECTIONS HAS TO BE ACCORDING TO ELECTRICAL DRAWINGS ATTACHED WITH THE MANUALS.

6.1.2

UPTILL NOW IF THINGS ARE OK, THEN CHECK THE INPUT SIGNAL RECEIVED FROM MASTER PANEL. TRANSDUCER PROVIDES THE OUTPUT SIGNAL IN THE RANGE FROM 4 – 20 milli Amp. TRANSDUCER SIGNAL IS FED TO ANALOG INPUT MODULE WHICH READS THE PRESSEURE VALUES & SENDS IT TO ANALOG OUTPUT MODULE FOR FURTHER DISPLAY TO DM. CROSS CHECK ALL THE CONNECTIONS WITH ELECTRICAL DRAWINGS & TRANSDUCERS FOR ANY LEAKAGES.

6.1.3

AFTER FOLLOWING THE FIRST TWO STEPS, IF ALL THE CONNECTIONS & SETTINGS ARE FOUND OK & STILL NO READING IS DISPLAYED ON DM WHEN THERE IS READINGS ON ANALOG GAUGE ON UNIT, PROGRAM THE GAUGE AS PER THE PROGRAMMING STEPS ATTACHED ABOVE.

6.1.4

ANOTHER FAULT THAT A DM CAN HAVE IS, GAUGES SHOWS CORRECT READINGS BUT WHEN PRESSURE DROPS, NO CUTOFF RELAY IS ACTIVATED FOR ALARM SIGNAL TO BLOW & INDICATE LOW PRESSURE. IN SUCH CASE FIRSTLY CHECK THE CONNECTIONS FOR ALARM ON DM AS PER DRAWINGS. IF CONNECTIONS ARE FOUND OK AND STILL ALARM NOT COMING, THEN MAKE THIS VISUAL CHECK, OBSERVE SETPRESSURE INDICATOR (SP) OUT OF SP1/SP2/SP3/SP4 HIGHLIGHTED RED ON THE RIGHT PORTION OF THE DM .IT SHOWS THAT THE PARTICULAR RELAY IS ACTIVATED FOR THE ALARM TO ACTIVATE. IF THIS SP INDICATION IS NOT VISIBLE,

Objectives

Programming Languages are LD, SFC, FBD, CFC and ST.

Ladder Diagram remains popular and easier because of its graphical nature so we used LD (Ladder Diagram).

As with lawn power tools, it is most efficient to use the best programming language for the application, to avoid the complexity of driving the square application peg into the round tool hole. With IEC 61131-

3 programming languages, PLC programming and maintenance are enhanced when the strengths of all the languages are used.

Programming languages: LD, SFC, FBD, CFC and ST

the strengths and best applications Ladder Diagram (LD) and Sequential Function Chart (SFC).

“Which IEC 61131-3 Programming Language is best? Part 2” will discuss Function Block Diagram (FBD), Continuous Function Chart (CFC), Structured Text (ST), and how they can be mixed and matched for optimal results.

What is Ladder diagram (LD) programming?

Ladder diagram programming or LD, traces its history back some 100 years to relay ladder logic (RLL), which was created to describe systems of electrical components such as relays, timers and motors. In the early days of automation, when PLCs were replacing relays and timers, it made perfect sense to create a programming language familiar to the user base and similar to the tool it was replacing. Unfortunately, as controllers became more capable and evolved past relays and timers, the original LD language was pressed into services it was never intended for and was poorly suited.

This situation was exacerbated by the slow pace at which PLC vendors provided new languages better suited to PLC and programmable automation controllers (PAC) applications. This was particularly true with controllers originating in North America, which explains the global differences in the enduring popularity of LD.

Strengths of LD programming

The strength of LD and the key to its enduring popularity is its graphical nature. Of all the generalization can say about engineers, it is safe to say engineers tend to be graphically oriented. (Who among us can effectively communicate without paper and pencil, or a white board?) Early on, most LD

	SARA SAE ENGINEERING SPECIFICATION	
	Section: SES 26 – 853	
	Issue: “A”	Rev No: “2”
	Eff. Date: 20-12-2024	Page: 19 of 31

programming alternatives were text-based languages that did not resonate with engineers’ graphical nature. This led to further reluctance to move on from LD. Fortunately, that situation is changing.

LD remains a great language for which it was originally intended – complex Boolean logic. Staying within this realm, LD logic is simple to design and simple to debug. Figure 3 illustrates this point by showing the same Boolean logic in several IEC 61131-3 languages. Say we are expecting “Inspect” to be TRUE. How easy is it to determine why the result is not as expected? In LD, the answer is quickly determined by observing where the path of solid blue contacts is interrupted.

Use the right language for control system programming

To communicate effectively in the English language, it’s important to have the right vocabulary and know how to use that vocabulary effectively. To create effective industrial controls programs, it is important to have the right languages and know how to use those languages effectively. IEC 61131-3 provides the languages, and this article has provided guidance on effective use of LD

22	Communication connector QTY..... Color.....						
23	Mains fail connection done at position _____.						
24	Terminal Block used (Qty) a) Blue-----b) Yellow----- c) Gray----- d) Red----- e) Black-----f)Green-----						
25	Push button with green light Indicator Qty _____ Nos.						
26	Push button with red light Indicator Qty _____ Nos.						
27	ON/OFF switch (Direction , Cap)						
28	Pilot light (alarm) Qty _____ Nos. Color _____						
29	Push button lamp test Number..... Color.....						
30	Pilot light (Communication, Error) Qty _____ Nos. Color _____						

S.No	System	Practical Value/status	Status	Remark (If any)	Date	Done By	Checked By
31	Pilot light (low rig air press.) Qty _____ Nos. Color _____						
32	Push button Acknowledge Number..... Color _____						
33	Pilot light (low hydraulic press.) Qty _____ Nos. Color _____						
34	Pilot light (mains fails) Qty _____ Nos. Color _____						
35	Pilot light (low fluid level) Qty _____ Nos. Color _____						
36	Pilot light (motor run) Qty _____ Nos Color _____						
37	Blind Cover Open /Closed properly(Yes/No) Shear Cover Open /Closed properly(Yes/No)						
38	Battery connection wire size----- mm						
39	Touch Screen Display S.No..... Model No..... Digital Pressure Gauge Model No..... (i) Accumulator Gauge S.No..... (ii) Annular Gauge S.No..... (iii) Manifold Gauge S.No.... (iv) Rig Air Gauge S.No..... (v) Shear ACC Gauge S.No..... (vi) Shear Reg Gauge S.No.....						
40	Verify Earthing at all the required points done						

S.No	System	Practical Value/status	Status	Remark (If any)	Date	Done By	Checked By
	to include power supply (I/O Module), SMPS, Cooler, , and Earthing Terminal blocks (Green).						
41	Verify :- Earthing of Enclosure Body Provision of extra point for use by customer.						
42	Verify Numbering of TB is done in accordance with the drawing						
43	Output Voltage from Power supply has been adjusted to approx 26.5VDC (range 24VDC-28 VDC)						
44	Cable used for input and output modules wiring is ofAWG Size of the wire used.....mm						
45	Serial No of Mini X- or Y Purge installed.....(if applied) Flow Rate set at-----L/Min Purge Testing at.....PSI						
46	Spark arrester installed and checked circlip is fixed over orifice Orifice Number-----						
47	Relief vent Serial.No.... Tested at PSI....						
48	All screw are tightened up with the help of Lock washer.						
49	The Number on enclosure and door given by machine shop are matching.						
50	The Fan and Filter unit (L&N) neatly with fan in Exhaust position						

S.No	System	Practical Value/status	Status	Remark (If any)	Date	Done By	Checked By
51	Condition of enclosures i.e no dents, scratch marks.						
52	Check tightness of cooler:Bolt----- Serial Number..... Cooler setting done at -----Psi through regulator						
53	Cooler setting done at -----Psi through regulator						
54	Gland for proximity size-----mm Qty.....nos						
55	Battery connection done with wire size of ---- ---mm						
56	Mains Fail connection done at position ----- according to drawings.						
57	Check tightness of battery terminals voltage-- ---- AH---- Make-----						
58	Earthing for enclosure body done with a point left for customer end (Externally)						
59	Earthing at all the required points done , which include power supply (I/O module) ,SMPS,Cooler, and Earthing terminal Blocks (Green)						
60	Numbering of TB is done in accordance with the drawings						
61	Input/Output wires inside PVC Channels needs to be of accurate length and size and						

S.No	System	Practical Value/status	Status	Remark (If any)	Date	Done By	Checked By
	also tied separately						
62	Interconnection for data communication connection between Master, Driller and Tool Pusher are according to drawing and communication is responding						
63	Size of the earthing wire Used-----						
64	All screw are tightened up with the help of lock washer						
65	The number on enclosures and door given by machine shop are matching.						
66	Condition of enclosure i.e no dents scratch marks						
67	Electrical wiring connection of proximity wires: To be done with Blue terminal box---- Wiring Connection from TB to amplifiers to be done with blue wires.						
68	Horn applied Serial Number ----- wiring done at ----- and -----						
69	Wires to be detailed for netural phase & earth also -----before dispatch.						
70	Remove the identification Number/Marks before dispatch

S.No.	Items/ function	Design Intentions	Potential mode of Failure	Cause of failure	Local Effects	System Effects	Global Effects	Corrective / Recommended Action	Sevearity	Detection	Probability Of Occurance	Risk Priority Number (RPN)	Current Control	Responsibility	Sevearity	Detection	Occurance	Risk Priority Number (RPN)
1	Proximity Sensor	Feedback of 4-way valve position.	Feedback of four way valve execution will stop.	<ul style="list-style-type: none">● Proximity Sensor may be faulty● connection loose between proximity Sensor to amplifier● Disc detain pointer may not come within sensor range	<ul style="list-style-type: none">● Inability to detect position of 4-way valves● Loss of local Monitoring	<ul style="list-style-type: none">● Loss of capability to see the position of 4- way valve.● Degraded efficiency	<ul style="list-style-type: none">● Delay in well control operations● Legal and Regulatory Consequences	<ul style="list-style-type: none">● Replace the Faulty Proximity Sensor● Upgrade Sensor system● Inspect the wiring and connections● Conduct routine inspections● Adjustment disc detain pointer	7	3	4	84	<ul style="list-style-type: none">● Verified in FAT● Use Quality products● Experienced workers will do the Assembly and connections	Assembly department.	5	2	3	30
2	Solenoid valve	Operation of 4-way valves (Open/Block/Close)	Operation of 4- way valve will stop from Driller/Tool pusher panels	<ul style="list-style-type: none">● Solenoid valve may be faulty● connection loose between Solenoid valve to PLC modules	<ul style="list-style-type: none">● Inability to operate 4-way valves● Operational disruptions● Impaired BOP functionality	<ul style="list-style-type: none">● Loss of well control system functionality● Increased downtime for unplanned repairs	<ul style="list-style-type: none">● Delay in well control operations● increased risk of blowout● In case of failure solenoid valve will not be able to operate BOP rams open/close	<ul style="list-style-type: none">● Immediately replace the faulty component● Inspect the wiring and connections● Check the air filter of solenoid valve input line	7	5	4	140	<ul style="list-style-type: none">● Verified in FAT● Use Quality products● Circuit protection, Testing● Spare part list	Assembly department.	4	2	3	24
3	Push button	Giving Signal to operate 4-way valve funcations (Open/Block/Close)	Inability to Activate BOP Functions from remote control pnaels	<ul style="list-style-type: none">● Pushbutton may be faulty● connection loose between push button to PLC modules● Faulty Actuation mechanism	<ul style="list-style-type: none">● Partial or complete failure of specific BOP functions.● Operational disruptions	<ul style="list-style-type: none">● 4-way valve will not operate for open/block/close● Operational Delays	<ul style="list-style-type: none">● Operational inefficiency● Extended downtime	<ul style="list-style-type: none">● Immediately replace the faulty component● Inspect the wiring and connections	7	5	4	140	<ul style="list-style-type: none">● Verified in FAT● Item must be in stock.● Party recommended spare part list.	Assembly department.	3	2	3	18
4	Pilot light	Indicates the 4-way valve positions either open,block or close	Inability to see 4- way valve position on remote control panels (open/block/close)	<ul style="list-style-type: none">● Pilot light may be faulty● connection loose between pilot light to PLC modules● LED may be burned	<ul style="list-style-type: none">● Inability to detect 4-way valve positions● Operational disruptions	<ul style="list-style-type: none">● Loss of well control system functionality● Increased downtime for unplanned repairs	<ul style="list-style-type: none">● Compromised well control● degraded efficiency● missed preventive maintenance triggers	<ul style="list-style-type: none">● Immediately replace the faulty component● Inspect the wiring and connections	7	3	4	84	<ul style="list-style-type: none">● Verified in FAT● Item must be in stock.● Party recommended spare part list.	Assembly department.	5	2	3	30

	SARA SAE ENGINEERING SPECIFICATION	
	Section: SES 26 – 853	
	Issue: "A"	Rev No: "2"
	Eff. Date: 20-12-2024	Page: 28 of 31

5	Digital Gauge	Receive electrical signal from Transducer and displayed as a digital reading on the gauge's screen	Inability to see pressure reading on remote control panels	<ul style="list-style-type: none"> Digital Gauge may be faulty Loose wiring Excessive vibration Extreme Temperature 	<ul style="list-style-type: none"> Inability to see pressure reading Localized failure of BOP operations Operational disruptions 	<ul style="list-style-type: none"> Loss of well control system functionality Undetected failure leading to cascading system issues Reduced safety margins 	<ul style="list-style-type: none"> Safety and Well Control Risks Operational Delays and Loss of Revenue 	<ul style="list-style-type: none"> Immediately replace the faulty component Inspect the wiring and connections perform system pressure test Verify pressure readings on digital gauges 	7	4	4	112	<ul style="list-style-type: none"> Verified in FAT Proper surging to reduce vibrations Use quality product Party recommended spare part list. 	Assembly department.	4	2	3	24
6	Amplifier	Low signal received from sensors and give to plc modules with amplify signal.	Feedback of four way valve execution will stop.	<ul style="list-style-type: none"> Proximity Sensor may be faulty connection loose between proximity Sensor to amplifier Amplifier may be faulty 	<ul style="list-style-type: none"> Inability to detect position of 4-way valves Loss of local Monitoring 	<ul style="list-style-type: none"> Loss of capability to see the position of 4-way valve. Degraded efficiency 	<ul style="list-style-type: none"> Delay in well control operations Legal and Regulatory Consequences 	<ul style="list-style-type: none"> Replace the Faulty Inspect the wiring and connections Cunduct routine inspections Verify the input voltage 	7	3	4	84	<ul style="list-style-type: none"> Verified in FAT Use Quality products Experienced workers will do the Assembly and connections Party recommended spare part list. 	Assembly department.	5	2	3	30
7	Pressure Swtich	Feedback of 4-way valve position.	Feedback of four way valve execution will stop.	<ul style="list-style-type: none"> Pressure switch may be faulty Wiring fault or loose connections Sunbber oil may be jammed Adjustment wheel may be not set properly 	<ul style="list-style-type: none"> Inability to detect position of 4-way valves Loss of local Monitoring 	<ul style="list-style-type: none"> Loss of capability to see the position of 4-way valve. Degraded efficiency 	<ul style="list-style-type: none"> Delay in well control operations Legal and Regulatory Consequences 	<ul style="list-style-type: none"> Replace the Faulty Pressure switch inspect and clean sanubber oil Inspect the wiring and connections Cunduct routine inspections Adjustment pressure switch wheel 	7	4	4	112	<ul style="list-style-type: none"> Verified in FAT Use Quality products Experienced workers will do the Assembly and connections 	Assembly department.	4	2	3	24
8	Pressure Transducer	Convert pressure into an electrical signal and displayed as a digital reading on the gauge's screen	Inability to see pressure reading on remote control panels	<ul style="list-style-type: none"> Pressure transducer may be faulty Loose wiring Sunbber oil may be jammed 	<ul style="list-style-type: none"> Inability to see pressure reading on remote panels Localized failure of BOP operations Operational disruptions 	<ul style="list-style-type: none"> Loss of well control system functionality Undetected failure leading to cascading system issues Reduced safety margins 	<ul style="list-style-type: none"> Safety and Well Control Risks Operational Delays and Loss of Revenue 	<ul style="list-style-type: none"> Immediately replace the faulty component Inspect the wiring and connections perform system pressure test Verify pressure readings on digital gauges inspect and clean sanubber oil 	7	4	4	112	<ul style="list-style-type: none"> Verified in FAT Use quality product Critical spare parts are kept on hand to replace any damaged components 	Assembly department.	4	2	3	24
9	Purge	To prevent explosion in hazardous areas by continuously removing potentially flammable gases from the system	Reduced system readiness and safety	<ul style="list-style-type: none"> Purge may be faulty Air supply failure Insufficiant air supply 	<ul style="list-style-type: none"> Flamable Gases Can be enter inside the Panels. Short circuit or PLC System can be Burn or Failure 	<ul style="list-style-type: none"> Degraded efficiency BOP control system failure 	<ul style="list-style-type: none"> Safety and Well Control Risks Regulatory and Legal Consequences 	<ul style="list-style-type: none"> Repair or Replace Faulty Components Compressor with sufficient air supply 	5	3	4	60	<ul style="list-style-type: none"> Critical spare parts are kept on hand to replace any damaged components 	Assembly department.	3	2	3	18

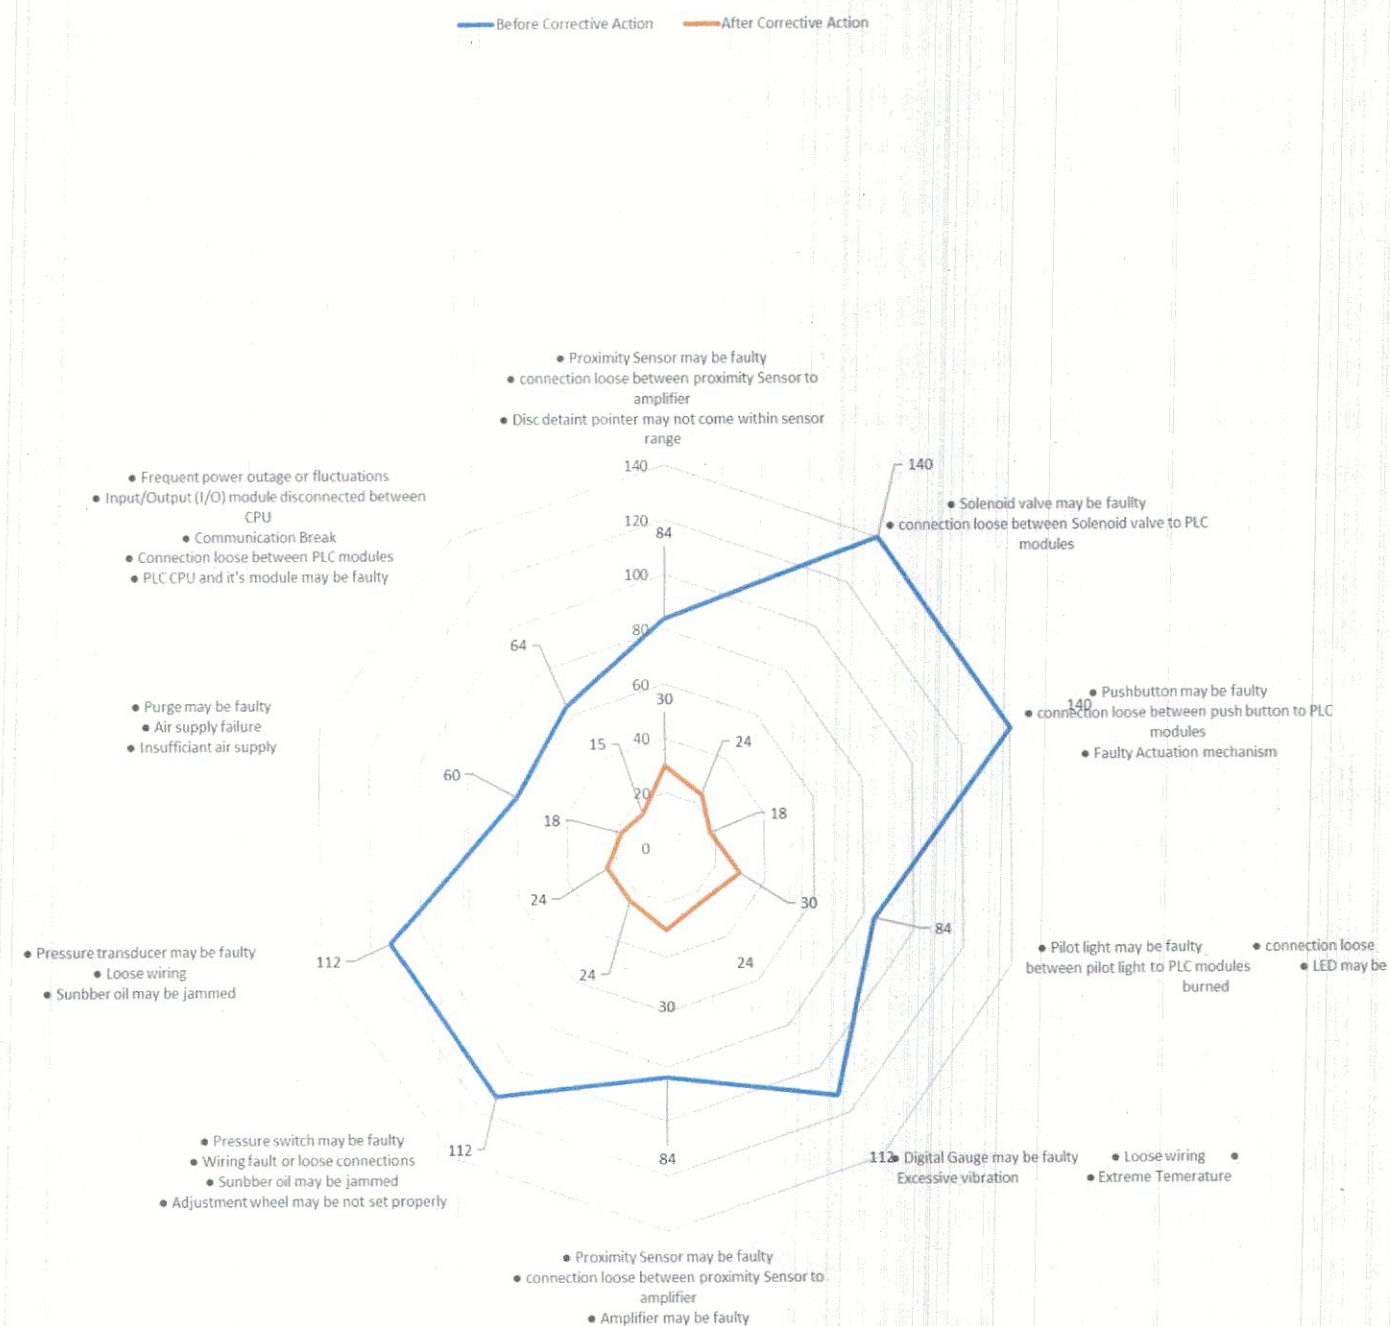

10	PLC CPU and it's module	Receives input signal from sensors/Pressure switches/push button, processes the information and control devices	Inability to Activate BOP Functions form remote control panels and monitor 4-way valve position, pressure readings, alarms	<ul style="list-style-type: none"> • Frequent power outage or fluctuations • Input/Output (I/O) module disconnected between CPU • Communication Break • Connection loose between PLC modules • PLC CPU and it's module may be faulty 	<ul style="list-style-type: none"> • Complete failure of BOP functions. • Operational disruptions • Personnel injuries or fatalities • Evacuation delays • Inability to operate 4-way valves • Inability to detect position of 4-way valves • Loss of local Monitoring 	<ul style="list-style-type: none"> • Loss of well control system functionality • 4-way valve will not operate for open/block/close • Operational Delays • Loss of capability to see the position of 4-way valve. • Communication Breakdown of Valves Remote operation, Alarm & indication. 	<ul style="list-style-type: none"> • Blowout Risk • Operational Delays and Financial Loss • Regulatory Compliance Issues 	<ul style="list-style-type: none"> • Immediate Diagnosis • Repair or Replace Faulty Components • Check Communication Links • Power Supply Inspection • Inspect the wiring and connections • Conduct routine inspections 	8	2	4	64	<ul style="list-style-type: none"> • Verified in FAT • Simulate the failure condition & check the redundant working of both panel. • Software valiation to be verified • Experienced workers will do the Assembly and connections • Party recommended spare part list. 	PLC programmer/Assembly department.	5	1	3	15
